One.Installation and Removal

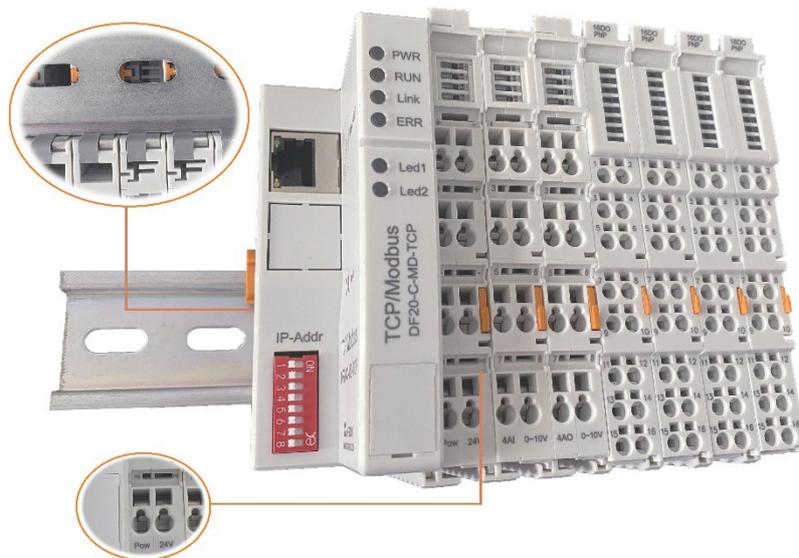

1.Installation

- Modules installed at the bottom of the DIN rail lock can be installed on the 35 mm DIN rail safely and reliably, it needs to be modules installed on the gaps, the module along the direction of arrow to DIN card pin, place the module on the DIN rail.
- In addition to install the adapter, the left have a manual card buckle for locking guide rail.

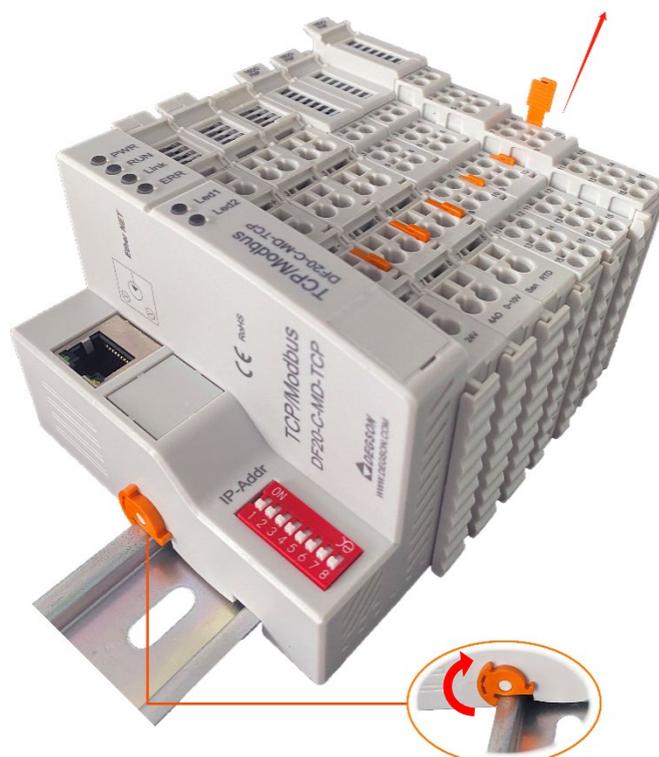

2. Ground Protection

- There is a metal shrapnel on the back of the module, which is used for effective grounding with the guide rail. The metal shrapnel is connected with the grounding PE inside the adapter module.

3. Removal

- Module is disassembled should first remove the modules all signal cables or power cable, then the direction of arrow card pin (below yellow parts), when removing the adapter module, counterclockwise to open the guide rail lock is needed.

4. Notes

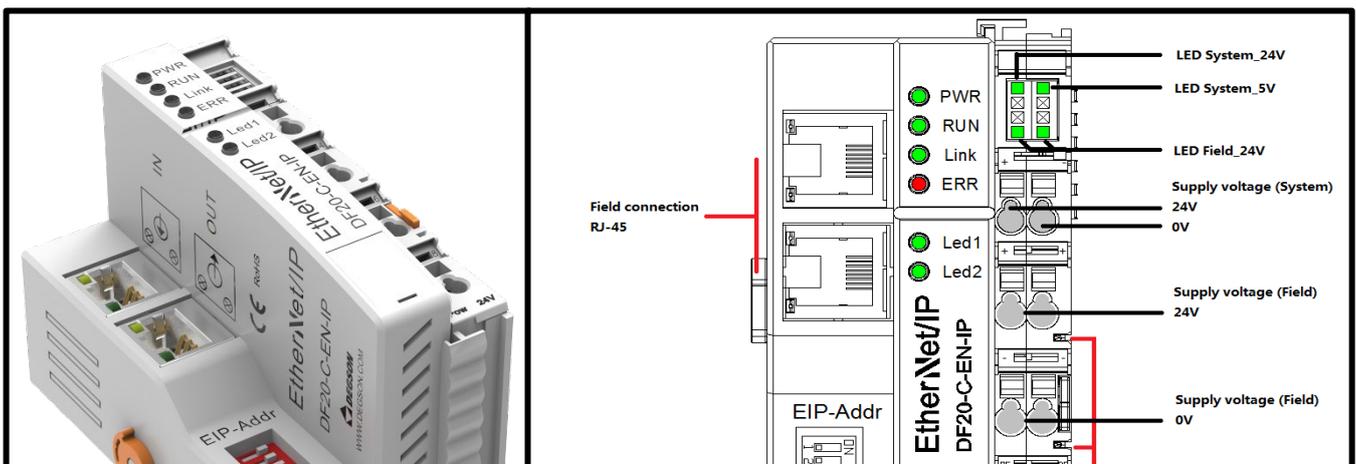

- If a module is difficult to install, do not use brute force to install it, otherwise the current module or other modules may be damaged. Remove the module from the guide rail, check whether the module is abnormal (for example, blocked by foreign bodies), and then insert and remove the module.

◆ EtherNET IP FieldBus Adapter (DF20-C-EN-IP)

- DF20-C-EN-IP the fieldbus adapter from standing and EtherNET IP are linked together, EtherNET IP is an open industrial Ethernet standard in the field of automation. It automatically configures and generates local process images including analog, digital, and special functional modules. Analog module and special function module (word-by-word data transfer), digital module (bit-by-bit data transfer).
- The fieldbus coupler is integrated into the application as an EtherNET IP device.
- The coupler features an integrated 2-port switch, allowing easy line structure creation without additional network components.

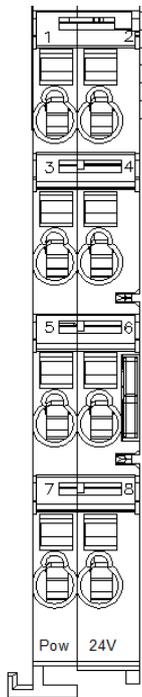

1.Specification

Technical data	
Communication	EtherNET IP
Bus segment length (max.)	100M
Transmission medium	Twisted Pair S-UTP; 100 Ω; Cat. 5
Transmission rate	10/100Mbps, full duplex
Number of extensible modules	32
Address mapping	Yes
PDO DATA	1024 bytes
Address setting	EtherNET IP specification, DIP switch
Connection type	via pluggable connector (Spring terminal blocks)
Working voltage	24VDC (-15%~+20%)
Current without load	<350mA
Supply system voltage	5VDC
Supply system current	2000mA
Supply field voltage	24V~32VDC; via power jumper contacts
Supply field current(max.)	5A
Isolation	500Vsystem/field Electrical isolation
Connection data	
Connection technology: communication/fieldbus	EtherNET IP: 2 x RJ-45
Connection technology: system supply	2 x via pluggable connector
Connection technology: field supply	6 x via pluggable connector
Connection type 1	System/field supply
Area of wire	0.2~2.5mm ² /28~14AWG
Strip length	8~9mm/0.31~0.35inches
Mounting type	DIN-35 RAIL

Material Data	
Color	light gray
Housing material	Polycarbonate; polyamide 6.6
Conformity marking	CE
Environmental requirements	
Ambient temperature (operation)	-25~60°C
Surrounding air temperature (storage)	-40~85°C
Protection type	IP20
Pollution degree (5)	2, Per IEC 61131-2
Operating altitude	without temperature derating: 0~2000m
Mounting position	Any
Relative humidity (without condensation)	5~95%RH
Vibration resistance	4g, Per IEC 60068-2-6
Shock resistance	15g, Per IEC 60068-2-27
EMC immunity to interference	Per EN 61000-6-2
EMC emission of interference	Per EN 61000-6-3
Exposure to pollutants	Per IEC 60068-2-42 and IEC 60068-2-43
Permissible pollutant concentration H2S at a relative humidity < 75%	10ppm
Permissible pollutant concentration SO 2 at a relative humidity < 75%	25ppm

2. Hardware Interface

- Wiring Terminal

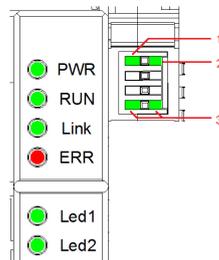

NO.	Definition	Description
1	System power 24V	Power the module. Give Goldfinger 5V.
2	System power 0V	
3	Field power 24V	Power the load.
4		

5	Field power 0V	
6		
7	PE	Protect Earthing
8		

Notes: It is recommended to use two isolated 24V power supplies to provide two power supplies for the coupler respectively to achieve the best anti-interference performance.

- **LED Indicator**

Indicator	Status	Description
PWR	Green: ON	Power Normal
	Green: OFF	Power Failure
RUN	Green: ON	I/O system is running
	Green: OFF	I/O system is stopping
Link	Green: Flash	Module to establish communication, there is data transmission
	Green: OFF	Module communication is not established
ERR	Red: ON	data exchanging failure
	Red: OFF	data exchanging normal
Led1	Green: ON	Port 1 connected successfully.
	Green: Flash	Port 1 has data communication.
Led2	Green: ON	Port 2 connected successfully.
	Green: Flash	Port 2 has data communication.
1	Green: ON	System Power Normal
	Green: OFF	System Power Failure
2	Green: ON	Goldfinger Power Normal
	Green: OFF	Goldfinger Power Failure

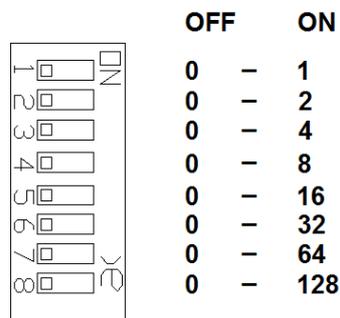

3	Green: ON	Field Power Normal
	Green: OFF	Field Power Failure

- **RJ45 Interface**

Used to establish communication with the upper computer. The coupler features an integrated 2-port switch, allowing easy line structure creation without additional network components.

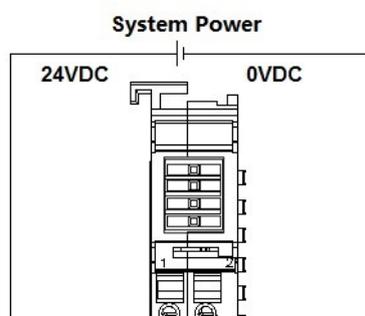

- **DIP switch**

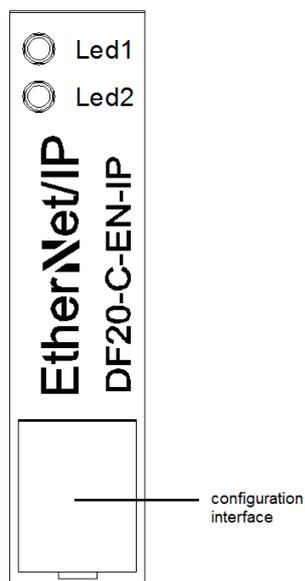

The DIP switch is used to set the adapter module address. It is set by an 8-bit hardware DIP switch. Each EtherNET IP adapter has a unique station address .

- **Wiring**

Notes : Only the right side of the adapter is captured here because of the aesthetics.

- **Configuration Interface**

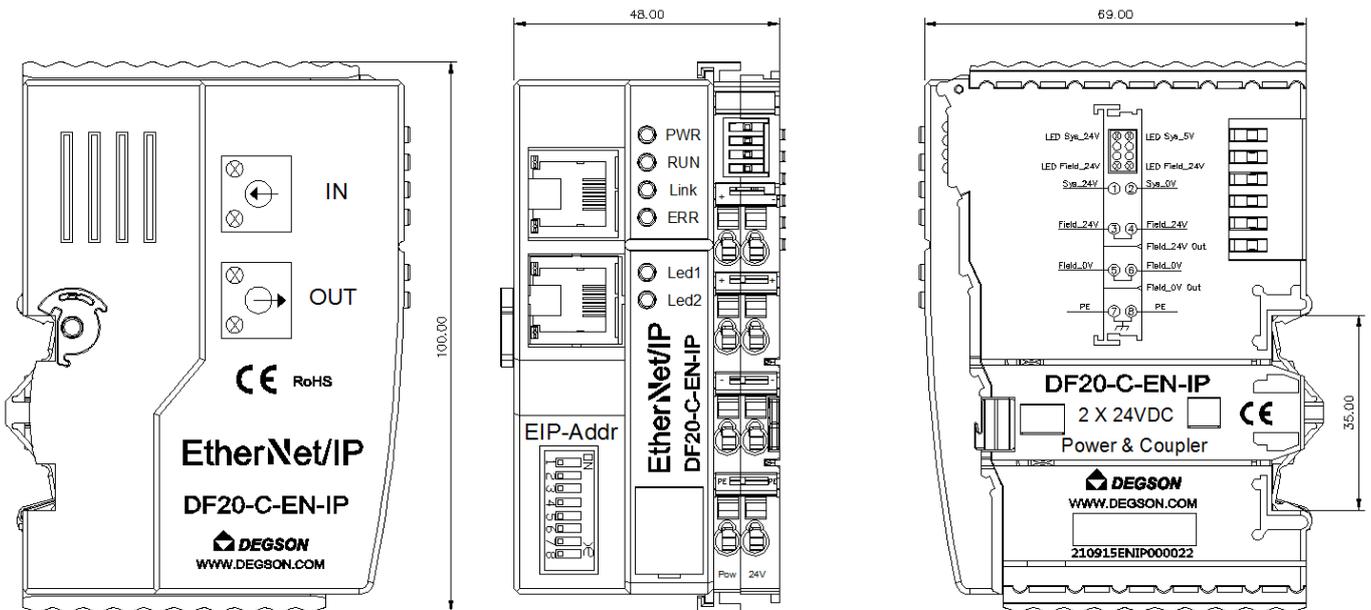

Set the configuration interface to facilitate the adapter program upgrade.

注: Non-professionals and authorized personnel are prohibited from using this interface to avoid procedural problems.

3.Machinery installation

◆ 8 channel Digital input /24VDC/PNP (DF20-M-8DI-P)

- It receives control signals from digital field devices (e.g., sensors).
- 8-channel digital input, active PNP high level.
- Each input module has a noise-rejection filter.
- Each input module is equipped with an LED indicator.
- Field and system levels are Photoelectric isolated.
- Protection level IP20.

The installation size is shown in the following figure (unit: mm):

◆ 16 channel Digital output /24VDC/PNP(DF20-M-16DO-P)

- It transmits binary control signals from the automation device to the connected actuators (e.g., magnetic valves)
- 16-channel digital output, active PNP high level.
- Each output module has a noise-rejection filter.
- Each output module is equipped with an LED indicator.
- Field and system levels are Photoelectric isolated.
- Protection level IP20.

The installation size is shown in the following figure (unit: mm):

◆ 4 channel Analog input /voltage type / $\pm 10V$,0~10V(DF20-M-4AI-U-4)

- This analog input module processes standard $\pm 10V$,0~10V signals.
- 4 channel Analog input , voltage type .
- The two LED indicators respectively indicate the normal operation and communication of the module.
- Field and system levels are Magnetic isolated.
- Transmitted with a resolution of 16 bits.
- Protection level IP20.

- This analog input module processes standard 0~20mA ,4~20mA signals.
- 8 channel Analog input , current type .
- The two LED indicators respectively indicate the normal operation and communication of the module.
- Each input channel has an LED indicator light.
- Field and system levels are Magnetic isolated.
- Transmitted with a resolution of 16 bits.
- Protection level IP20.

◆ 4 channel Analog output/current type/0~20mA,4~20mA (DF20-M-4AO-I-5)

- This analog output module generates standard 0~20mA,4~20mA signals.
- 4 channel Analog output , current type .
- The two LED indicators respectively indicate the normal operation and communication of the module.
- Field and system levels are Magnetic isolated.
- Transmitted with a resolution of 16 bits.
- Protection level IP20.

◆ 4 channel TC measurement (DF20-M-4TC-KETJ)

- The module supports 4-channel thermocouple signal acquisition, K type ,E type ,T type ,J type ,B type ,S type ,R type ,N type ,L type.
- The module could be connected to a 2-wire thermocouple sensor.
- This module reserved eight cold end compensation output channels to compensate the cold end temperature difference.
- The two LED indicators respectively indicate the normal operation and communication of the module.
- Each channel is equipped with an LED indicator.
- Field and system levels are Magnetic isolated.
- Transmitted with a resolution of 16 bits.
- Protection level IP20.

● Wiring

As shown in the picture:

一共为 4 个通道，分别为 1, 2 为通道一；3, 4 为通道二；5, 6 为通道三；7, 8 为通道四。

本模块采用二线制传感器进行连接，将传感器的+接入 1 端口，将-接入 2 端口，以此类推。

本模块预留了四个冷端补偿输出通道用来补偿冷端温度差异，若需要补偿时，只需在初始调试时补偿一次即可。

The installation size is shown in the following figure (unit: mm):

◆ 8 channel TC measurement (DF20-M-8TC-KETJ)

- The module supports 8-channel thermocouple signal acquisition, K type ,E type ,T type ,J type ,B type ,S type ,R type ,N type ,L type.
- The module could be connected to a 2-wire thermocouple sensor.
- This module reserved eight cold end compensation output channels to compensate the cold end temperature difference.
- The two LED indicators respectively indicate the normal operation and communication of the module.
- Each channel is equipped with an LED indicator.
- Field and system levels are Magnetic isolated.
- Transmitted with a resolution of 16 bits.
- Protection level IP20.

2.Set the DF20-C-EN-IP IP address

- **IP Setting Tool sets the IP address**

Install the PSUpdate100 software provided by the supplier, as shown in Figure 6-1.

Figure 6-1

Open IP Setting Tool and select the network adapter, as shown in Figure 6-2.

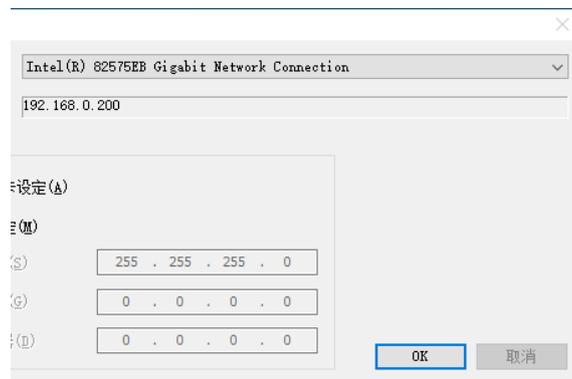

Figure 6-2

Use the IP Setting Tool to scan for the adapter and set its IP address, as shown in Figure 6-3(a) to Figure 6-3(d).

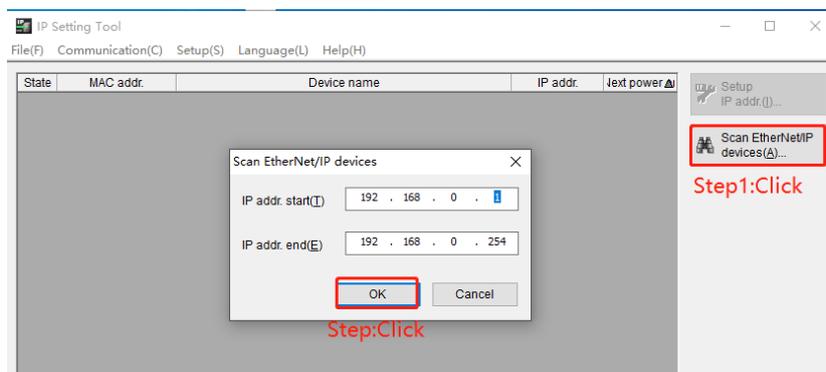

Figure 6-3(a)

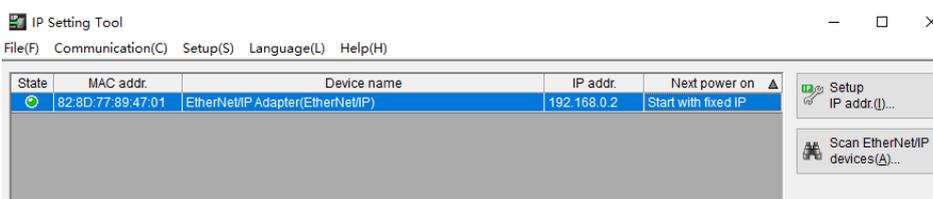

Figure 6-3(b)

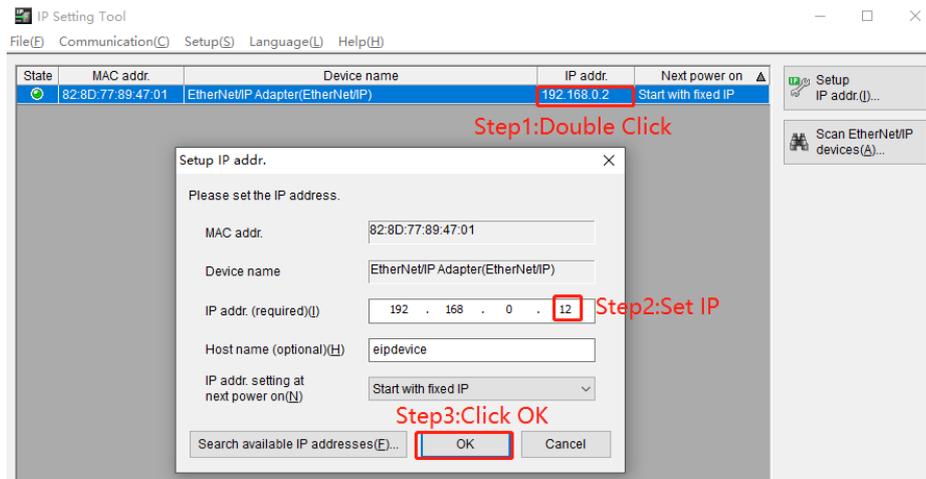

Figure 6-3 (c)

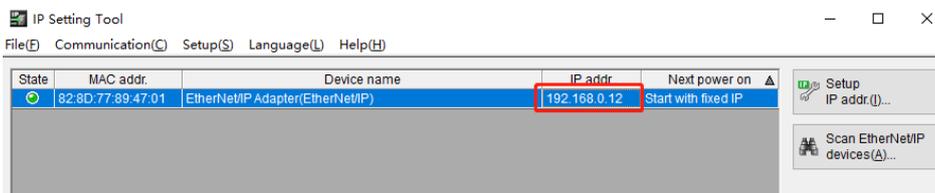

Figure 6-3 (d)

Change the network segment of the adapter, as shown in Figure 6-3(a) to Figure 6-3(b).

As shown in Figure 6-3 (b), after the network segment is modified, the software cannot be

reconnected to the adapter automatically, and "Failed" is displayed. **The adapter needs to be**

powered on again for the new IP address to take effect.

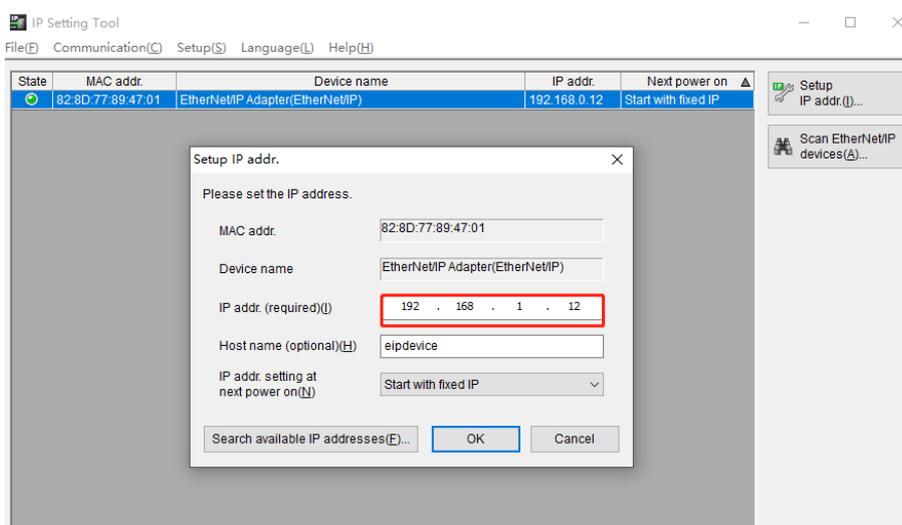

Figure 6-3 (a)

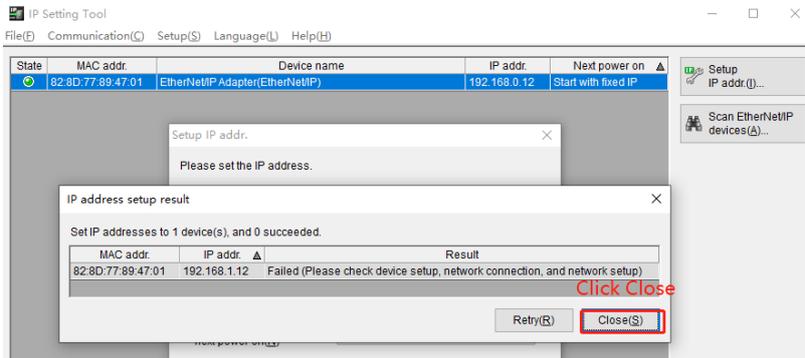

Figure 6-3 (b)

As shown in Figure 6-4(a), modify the computer network segment, reopen the IP Setting Tool, and scan the coupler, as shown in Figure 6-4(b).

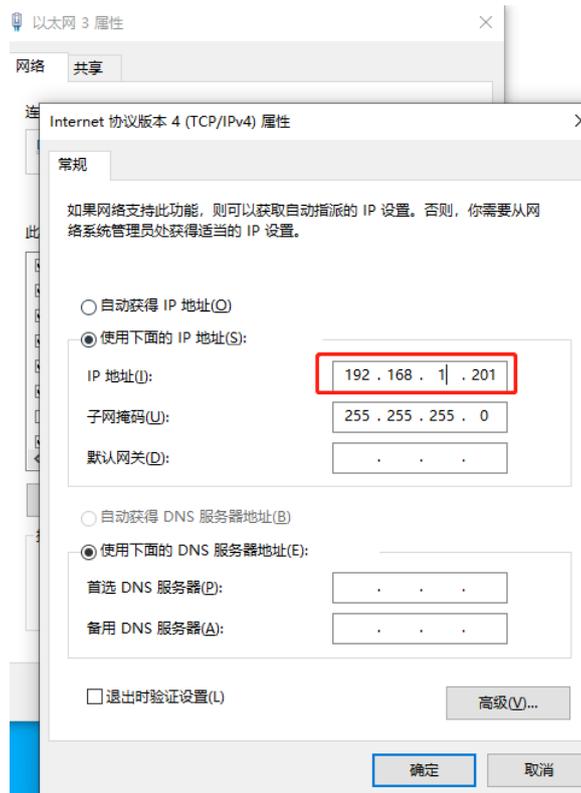

Figure 6-4 (a)

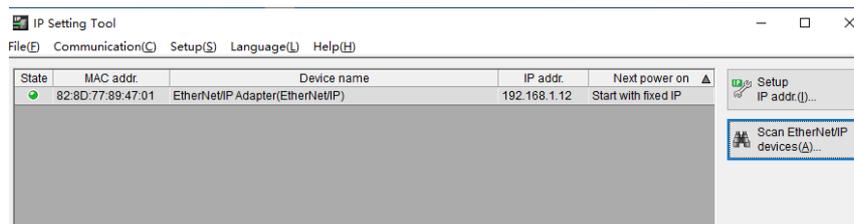

Figure 6-4 (b)

- **Reset IP address**

If the IP address is forgotten, lost, or otherwise abnormal, the adapter can reset the module by using the IP address reset function and restore factory Settings by using the special operation of the DIP switch. The specific operations are as follows:

As shown in Figure 6-5(a), set the DIP switch to 254 and power on the module. The default IP address of the module is 192.168.0.254.

Figure 6-5 (a)

After the module is powered on, flip the DIP switch to 0 when there is no power on, as shown in (b) in Figure 6-5.

Figure 6-5 (b)

Then set the IP address of the coupler as described in section 4.1.2 or 4.1.3.

3. RSLogix 5000 config

IP setting and modification reference

In this process, the IP address of the AB PLC is 192.168.1.13 and the IP address of the DF20-C-EN-IP adapter is 192.168.1.3. New project, open RSLogix 5000 software, click “File”, then click “new project”, select a PLC model, click OK, as shown in Figure 6-6.

Then insert DF20-M-16DI-P and DF20-M-16DO--P in slot 2 and slot 3, respectively, calculate the Size of "Produced Data Size" and "Consumed Data Size", and fill these two data into the input/output field. Figure 6-20 to 6-21 shows the configuration process.
